Results-driven Backend AI Engineer & Data Science student at GEC Bikaner, specializing in intelligent system architecture and modern web technologies. Driven by an insatiable curiosity for Machine Learning, Data Analytics, and high-performance backend systems, I combine computational thinking with creative problem-solving to deliver production-grade applications.

TECHNICAL SKILLS

Programming	C, C++, Python
Backend Dev	Backend Engineering, System Architecture, API Development, Model Integration
Artificial Intelligence	Generative AI, Prompt Engineering, AI Fundamentals
Data Science	Pandas, Matplotlib, Seaborn, Data Visualization
Web Development	HTML, CSS, JavaScript, Responsive Design, UI/UX Design
Tools & Automation	n8n, Workflow Automation, Git, GitHub, Jupyter Notebook, Google AI Studio, Replit

EXPERIENCE

Backend AI Engineer & Web Developer Intern *15 June – 15 July 2026*

| Tranqli

- Designed and developed responsive, mobile-first web applications while simultaneously engineering the backend architecture to support them.
- Built robust RESTful APIs to seamlessly connect the interactive web frontend with Generative AI models on the backend.
- Optimized data pipelines and interactive elements to minimize latency between the web application and the AI endpoints, ensuring a smooth, real-time user experience.

Data Science Intern *February 2026*

| ShadowFox

- Conducted extensive Exploratory Data Analysis (EDA) on real-world datasets including Delhi Air Quality Index (AQI) and Cricket Fielding Data.
- Designed comprehensive data visualization suites using Matplotlib and Seaborn (histograms, boxplots, scatterplots) to uncover environmental and sports performance trends.
- Engineered structured Python scripts and generated thorough technical documentation to accelerate stakeholder decision-making.
- Managed project versioning and synchronized collaborative workflows using Git and GitHub repository practices.

PROJECTS

TCONGS INFOTECH — Corporate Website Redesign

View Project

- Engineered a premium, modern corporate website with a focus on editorial typography, fluid animations, and a sleek dark glassmorphism aesthetic.
- Built a robust frontend architecture utilizing React 18, Vite, TypeScript, and vanilla CSS for optimal performance and responsive design.
- Implemented custom scroll animations using Intersection Observer and engineered an interactive support chat interface with seamless morphological transitions.

Personal Portfolio

View Project

- Developed a responsive personal portfolio website to showcase Machine Learning projects, Data Science skills, and academic achievements.
- Implemented an immersive galaxy-themed background using HTML5 Canvas and React hooks with dynamic parallax and interactive hover effects.
- Integrated a customized contact form with EmailJS and built a modular component architecture using Tailwind CSS for streamlined updates.

Vyoma.webx

View Project

- Designed and developed a high-performance web development agency website using React and Tailwind CSS to showcase modern UI architecture and custom web solutions.
- Engineered immersive 3D scroll animations using Framer Motion and integrated an interactive contact form, optimizing rendering logic to maintain a consistent 60FPS user experience.
- Implemented responsive, cross-device layouts to deliver a premium digital experience for prospective clients.

EDUCATION

Bachelor of Technology (B.Tech) - Artificial Intelligence & Data Science

2025 – 2029

Government Engineering College, Bikaner

CERTIFICATIONS

- **Backend AI Engineer Internship** – Tranqli
- **Introduction to Generative AI Studio** – Simplilearn + Google Cloud
- **Google Analytics Certification (GA4)** – Google
- **Data Science Internship Certificate** – ShadowFox
