Results-driven Backend AI Engineer & Data Science student at GEC Bikaner, specializing in intelligent system architecture and modern web technologies. Driven by an insatiable curiosity for Machine Learning, Data Analytics, and high-performance backend systems, I combine computational thinking with creative problem-solving to deliver production-grade applications.

TECHNICAL SKILLS

Programming	C, C++, Python
Backend Dev	Backend Engineering, System Architecture, API Development, Model Integration
Artificial Intelligence	Generative AI, Prompt Engineering, AI Fundamentals
Data Science	Pandas, Matplotlib, Seaborn, Data Visualization
Web Development	HTML, CSS, JavaScript, Responsive Design, UI/UX Design
Tools & Automation	n8n, Workflow Automation, Git, GitHub, Jupyter Notebook, Google AI Studio, Replit

EXPERIENCE

Backend AI Engineer & Web Developer Intern *15 June – 15 July 2026*

| Tranqli

- Designed and developed responsive, mobile-first web applications while simultaneously engineering the backend architecture to support them.
- Built robust RESTful APIs to seamlessly connect the interactive web frontend with Generative AI models on the backend.
- Optimized data pipelines and interactive elements to minimize latency between the web application and the AI endpoints, ensuring a smooth, real-time user experience.

Data Science Intern *February 2026*

| ShadowFox

- Conducted extensive Exploratory Data Analysis (EDA) on real-world datasets including Delhi Air Quality Index (AQI) and Cricket Fielding Data.
- Designed comprehensive data visualization suites using Matplotlib and Seaborn (histograms, boxplots, scatterplots) to uncover environmental and sports performance trends.
- Engineered structured Python scripts and generated thorough technical documentation to accelerate stakeholder decision-making.
- Managed project versioning and synchronized collaborative workflows using Git and GitHub repository practices.

PROJECTS

TCONGS INFOTECH — Corporate Website Redesign

View Project

- Redesigned and developed a modern, professional corporate website for a technology agency to enhance their digital presence and client engagement.
- Built a responsive frontend architecture using React, Vite, and TypeScript to ensure fast load times and a seamless user experience across devices.
- Integrated an interactive support chat interface to improve customer communication and streamlined navigation with custom scroll animations.

Personal Portfolio

View Project

- Developed a responsive portfolio website to effectively showcase technical skills, Machine Learning projects, and academic achievements to recruiters.
- Built an engaging user interface using React and HTML5 Canvas, creating interactive visual elements that highlight front-end development capabilities.
- Implemented a direct contact form using EmailJS to facilitate easy communication and designed a modular component architecture for maintainability using Tailwind CSS.

Vyoma.webx

View Project

- Developed a comprehensive agency website using React and Tailwind CSS to showcase web development services and custom digital solutions to prospective clients.
- Built an interactive interface with animations using Framer Motion to create an engaging user journey and highlight technical capabilities.
- Integrated a fully functional contact form to drive client lead generation and ensured a seamless, responsive experience across all devices.

EDUCATION

Bachelor of Technology (B.Tech) - Artificial Intelligence & Data Science

2025 – 2029

Government Engineering College, Bikaner

CERTIFICATIONS

- **Backend AI Engineer Internship** – Tranqli
- **Introduction to Generative AI Studio** – Simplilearn + Google Cloud
- **Google Analytics Certification (GA4)** – Google
- **Data Science Internship Certificate** – ShadowFox
